
Acknowledgments

We are indebted to many people who provided information and photographs found in this document, especially Jennifer Whipple, who was a wealth of information and insight on the park's plants and the source of many of the beautiful photographs. We thank Terry McEneaney, Jim Otton, and Doug Owen for their assistance on birds and wetland functions.

Special recognition is extended to Lynn Wilson for her skill and expertise in completing the initial photointerpretation including the delineation and classification of all wetlands for the National Wetlands Inventory within the park. Jaymee Fojtik provided quality control for photointerpretation, and Kevin Bon conducted draft map review. Kurt Snider provided wetland acreage statistics that was the basis for data analysis.

Thanks are extended to Mary Ann Franke and Sue Consolo Murphy for their critical review and editorial comments. We are especially indebted to Tami Blackford for her patience, encouragement, editing skill, and publication design expertise.
